

Hudson Vector Spray Event August 29 2019

Mosquitoes with Eastern Equine Encephalitis (EEE) Virus were confirmed August 28 by MDPH in the central part of town. Working with the Hudson Board of Health, truck-mounted Ultra-Low Volume (ULV) spraying is scheduled in the area below on August 29 after sunset.

It's important to note that spraying can reduce but not eliminate the threat of mosquito-borne illness in the areas that are sprayed. That's why it's important for individuals to continue to take personal precautions against mosquito bites, both before and after any spraying is conducted.

STREET LISTING:

- BABICK LAKE DR
